

## Teflon® Treatment

Teflon® is an inert molecule that penetrates into the micro pores of the paint and preserves colors. By limiting the adherence of debris to paint, this protective treatment facilitates cleaning, reducing the time and costs of maintenance. Your vehicle thus maintains its original brightness and shine much longer.

This treatment must only be applied by specially trained professionals. The Teflon® Treatment is suitable for all types of painted vehicles and flat metallic surfaces:

- cars
- trucks
- boats, etc.

A **guarantee certificate** is issued after the treatment.

### Paint application

The Teflon® treatment is a two-fold process. First, during **pre-treatment**, **Fluoresin®** is applied which coats the micro pores of the paint. Second, the application of a **finishing coat** fixes the pre-treatment and forms a protective, top coat.

The Teflon® treatment has been optimized to:

- **limit the adherence** of insects, bird excrement, resin, mud and other debris
- **delay the process of aging** the paint while allowing the possibility to undertake future touch-ups
- offer effective and durable **paint protection** from **corrosion** and pigment **oxidization**
- **extend the paints' luminosity** for several years, bringing an exceptional shine
- **protect** from climatic **aggressions, UV rays**, pollution and salt
- **reduce micro scratches** due to speed by facilitating the gliding effect of water

Type of vehicle	Price(CHF)
<b>City, Compact</b> Ex. Golf, Clio, C3, Corsa	800
<b>Limousine, Station Wagon</b> Ex. Mondéo, C5, Mégane, Forester	1200
<b>Monospace, SUV, 4x4</b> Ex. Espace, C8, Range Rover, Q7	1500

### Fibre application

The fibre protection treatment can be applied on **most textiles** composed of silk, cotton, wool, nylon, acrylic, polyolefin, polyester or rayon, as well as on leathers.

This treatment is suitable to:

- **prevent greasy stains** from penetrating into the fibre and dirt from encrusting into the fabric
- maintain the luminosity of the fabric's colour and **prevent the signs of aging**

The product forms an anti-stain protection around the fabric fibres rendering it water-resistant, while enabling it to breath. It does not modify the appearance, colour, or the texture of fabrics and thereby maintains its suppleness and elasticity.

The application of this treatment must be applied with precaution by trained professionals.
